

## Product Sheet

### **Green Power Steering Fluid (Euro)**

Green power steering fluid for **European** applications. Includes Mercedes, BMW, VW, Audi, Volvo and more. **Midas Green Power Steering Fluid** is a fully synthetic fortified power-steering fluid blend that is used in conjunction with the **Midas Power-Steering Fluid Exchanger**. The formulation utilizes polyalphaolefins to ensure outstanding oxidation stability and excellent low temperature performance and shear stability. Due, in part, to its ant-foaming characteristics, the product provides excellent detergency, wear protection, rust inhibition, and seal protection.

#### **Application / Directions**

- Remove old Power Steering Fluid from reservoir.
- Add NEW fluid to “full” do not overfill.
- Run vehicle 5 to 6 minutes while turning steering wheel to the left and to the right (purging system).
- Follow Power Steering Machine directions.
- Drain and Fill. Do not overfill.
- With NEW fluid turn steering wheel to the left and right to bleed air from system. (refill to full) do not over fill.

#### **Features / Benefits**

- Outstanding cold weather performance.
- Highly resistant to breakdown due to shearing and load
- Conditions seals and hoses to help prevent cracks and leaks.
- Helps extend system life by reducing wear on internal components.
- Superb oxidation stability.
